

Dear Hiring Manager,

I am excited to apply for the Network Engineer position at your organization. With a background in software development and a growing passion for network engineering, I bring a unique blend of programming knowledge, hands-on infrastructure experience, and a strong drive to master emerging technologies such as cloud and hybrid networking.

While my career began in coding and software development, I discovered my true interest in networking after joining SK C&C USA. Since then, I have immersed myself in designing, implementing, and maintaining enterprise-grade networks—leveraging my analytical and problem-solving skills from software development to approach networking challenges with precision and creativity.

This journey has not only deepened my expertise in routing (BGP, OSPF), switching, wireless, and security, but also solidified my ambition to expand into cloud networking. I am currently pursuing AWS Cloud certifications to strengthen my ability to design and manage infrastructures that seamlessly combine on-premises reliability with cloud scalability.

I believe my cross-disciplinary background—blending software logic, network engineering, and cloud readiness—positions me to contribute meaningfully to forward-looking network projects. I would welcome the opportunity to bring this perspective to your team and support the evolution of your infrastructure.

Thank you for considering my application. I look forward to the possibility of contributing to your organization's success.

Best regards,  
Keon Park
